

Prajwal Hebbar

Senior Engineer

prajwalhebbaras@gmail.com · +91 94839 24880 · Bengaluru, India · linkedin.com/in/prajwal-hebbar-a-s-a213b121a · github.com/prajwal-hebbar-07 · portfolio.hebbars.in

SUMMARY

Senior Engineer with nearly 5 years building configurable, enterprise-grade web platforms. Specializes in **React, TypeScript and schema-driven frontend architecture** — admin dashboards, permission systems and reusable rules/actions engines, shipped with the DevOps to run in production. Promoted to Senior Engineer at LYIK in April 2026 after shipping v2 and driving much of the v3 form platform. Outside work I ship **local-first Tauri 2 desktop and Expo mobile apps** in TypeScript and Rust, release pipeline included.

EXPERIENCE

Senior Engineer — LYIK Technologies Pvt. Ltd.

Apr 2026 – Present

On-site · Bengaluru · Previously Enterprise Engineer (Apr 2023 – Mar 2026)

- **Promoted to Senior Engineer** in April 2026 after shipping v2 and driving much of the **v3** configurable, schema-driven form platform (React 19 · Redux Toolkit · TypeScript · MUI).
- Built the v3 **admin dashboard**: a form-management console (Material React Table over the forms API) and a **user-management tree-table** modeling the org as a hierarchy/DAG, with full **user & relationship CRUD** wired to REST APIs.
- Added **bulk user onboarding** via client-side **CSV/ZIP** upload, a permission **guardrail** system (permission-gated routes, rule-driven widgets from `dashboard.json`), the **maker-checker approval workflow**, and **trusted API records** protected against user overwrite.
- Worked across the core form **engines** in the `@lyikadmin/lyik-form` monorepo — actions, rules (persona/permission-based hide & disable), derive and navigator — and wrote their **unit/integration test suites**.
- Delivered **SSO login**, **client-side encryption**, **JSON-driven theming**, funcex expressions, **liveness/KYC** detection and multi-file upload.
- Set up **Docker/Nginx** containerization and **GitHub Actions** CI/CD; built a **Frappe-based ERP** and a ServiceNow POC. Contributed to the company's **first enterprise client acquisition**.

STACK: React 19, TypeScript, Redux Toolkit, Material UI, TanStack Query, Material React Table, REST APIs, JSON-driven config, Monorepo, Vitest, Docker, Nginx, GitHub Actions, Frappe

Associate Web Developer — Content Enablers Inc.

Mar 2022 – Mar 2023

Remote · Bengaluru

- Led a **website revamp** using ReactJS and Bootstrap 5.
- Integrated **Google Analytics** and Google Tag Manager for product insight.

STACK: React, Bootstrap 5, Strapi CMS, Google Analytics, GTM

PROJECTS

LedgerFlow — local-first desktop expense tracker

github.com/prajwal-hebbar-07/ledger-flow

Tauri 2 · React 19 · Rust · SQLite — shipping signed macOS/Linux/Windows releases

- Models every money movement as **one row** in a single table — spend, income, self-transfer and card charge differ only by `direction` and which source column is set; **balances are derived in SQL**, so no stored total can drift from the ledger.
- Analytics and a **rules-based report generator** over one period picker: period-over-period deltas and charts built from CSS boxes, not a charting library. Optional **Ollama** categorisation writes prose, never figures.
- Disk and network access live in **Rust commands**; **GitHub Actions** cuts macOS/Linux/Windows builds and a **minisign-signed** manifest drives in-app auto-update.

STACK: Tauri 2, React 19, TypeScript, Rust, SQLite, Tailwind CSS 4, Ollama, pnpm workspace, Turborepo, GitHub Actions

Flex State — offline gamified workout app + reactive store

github.com/prajwal-hebbar-07/flex-state

pnpm + Turborepo monorepo · Tauri 2 · React 19 — app, UI package and published store

- **Deterministic plan generation**: identical profile, catalog and locations always yield an identical weekly plan, with equipment and exclusions resolved **per training ground**; the stamped generator version forces explicit regeneration.
- XP, level, rank and streak are **derived from the ordered completion history** — an `INSERT OR IGNORE` on the date key makes a repeat claim idempotent, and every persisted value passes a shape guard that fails closed.
- Published `flex-state`, a framework-agnostic store with `Object.is` dedupe, bound to React 19 through `useSyncExternalStore`; covered by Vitest and Node's test runner.

STACK: Tauri 2, React 19, TypeScript, Rust, SQLite, pnpm workspace, Turborepo, Vitest, Biome

GrowthOS — local-first study-plan tracker

private repository

Tauri 2 · React 19 · Expo 57 · Rust · SQLite — macOS desktop plus Android/iOS clients

- Two clients over **one model**: `@growth-os/learning` is consumed as TypeScript source with no build step, so the desktop app and the Expo React Native app share the same types, validators and eight bundled courses.
- Progress is **dated completions in SQLite** — one row per finished task, so totals and the consecutive-day streak derive from the ordered history and re-ticking never rewrites the original date.
- Task chat and day summaries call **Ollama from Rust**, never the webview, so no key reaches the frontend; summaries append into a markdown notes folder under a dated heading, and versioned **backup/restore** rejects a newer format whole rather than losing ticks.

STACK: Tauri 2, React 19, TypeScript, Rust, SQLite, Expo 57, React Native, Ollama, pnpm workspace, Turborepo

SKILLS

Frontend Core	ReactJS, Next.js, TypeScript, JavaScript, Redux Toolkit, React Native	UI & Design Systems	Material UI, TailwindCSS, Design Tokens, Figma, Paper
Architecture & Testing	Schema-driven UI, Rule/Derive/Actions engines, Monorepo, TanStack Query, Zod, Vitest	Backend, DevOps & Security	Node.js, Rust/Tauri 2, SQLite, Docker, Nginx, GitHub Actions, SSO, Client-side Encryption

EDUCATION

B.E. in Computer Science Engineering

VVCE, Mysuru — Visvesvaraya Technological University

Languages English · Kannada · Hindi
